VALUE OF ABANDONED OSS

0

GOOD TOOLS TO REVIVE THEM

1 No visibility into what's worth saving

Maintainers have no data-driven way to assess whether an abandoned repo is worth their time and effort to revive.

2 No clear path from "abandoned" to "active"

Even motivated maintainers don't know where to start. Documentation? CI? Community? The order matters and no one tells you.

3 Community re-engagement is hard

Former contributors have moved on. Attracting new ones requires the right issues, the right README, the right strategy.

RepoRevive: From Abandoned to Active in <5 Minutes

One URL. Full AI-powered diagnosis and revival roadmap — specific to your repository's code, community, and history.

Staleness Scoring

6-dimension algorithm: commit frequency, issue age, release recency, contributor count, stars, and archive status.

Revival Potential Score

Data-driven assessment of whether a repo is worth reviving based on community signals.

AI Revival Plans

Claude Opus generates quick wins, short-term goals, long-term roadmap, and community strategy tailored to your repo.

README Generator

Professional README.md auto-generated from your actual codebase, languages, and project context.

Good First Issues

AI-suggested beginner-friendly issues to attract new contributors and re-engage the community.

Revival Checklist

Interactive checklist covering docs, CI/CD, legal, community, and releases — with effort estimates.

HOW IT WORKS

Three Steps to Revive Any Repository

1. Analyze

Paste a GitHub URL. We fetch commits, issues, contributors, languages, and releases via the GitHub API.

2. Score

Our algorithm calculates Staleness (0–100) and Revival Potential (0–100) with a health grade A–F.

3. Revive

Claude AI generates a fully personalized revival plan, README, good-first issues, and interactive checklist.

72

Staleness Score

No commits in 14 months, 23 stale issues, no releases

68

Revival Potential

847 stars, 134 forks, 8 contributors — worth saving!

IMPROVEMENTS MADE

v1.0 → v2.0: A Complete Rebuild

Feature	v1.0 (Original)	v2.0 (This Hackathon)
Staleness detection	Basic date check only	6-dimension weighted algorithm
AI analysis	None	Claude Opus revival plans
README generator	None	AI-powered, repo-specific
Good First Issues	None	AI-generated suggestions
Revival checklist	None	Interactive + effort estimates
Language breakdown	None	Visual percentage chart
Security	None	Helmet, rate limiting, CORS
Tests	None	Unit + integration (Jest)
CI/CD	None	GitHub Actions pipeline
Docker support	None	Full docker-compose setup

A Multi-Billion Dollar Problem in Open Source

420M+

TOTAL GITHUB REPOSITORIES

ABANDONED (>1YR NO COMMITS)

\$8.8B

OSS CONTRIBUTION VALUE (ANNUAL)

Enterprise Users

Engineering teams that depend on abandoned OSS dependencies and need to fork + revive them for long-term support.

Individual Maintainers

Developers returning to side projects after months away, or inheriting ownership of unmaintained libraries.

OSS Foundations

Apache, Linux Foundation, CNCF — organizations responsible for maintaining hundreds of sub-projects.

Student Contributors

Hacktoberfest participants and students looking for projects to contribute to that actually need help.

PRODUCT DEMO

See RepoRevive in Action

```
●●● POST /api/analyze

$ curl -X POST https://reporevive-api.railway.app/api/analyze \
  -H "Content-Type: application/json" \
  -d '{"repo": "nicehash/NiceHashQuickMiner"}'

// Response (truncated)
{
  "scores": { "staleness": 74, "revivalPotential": 61, "healthGrade": "C" },
  "revivalPlan": {
    "summary": "NiceHashQuickMiner was a popular mining tool with strong community traction...",
    "quickWins": ["Update README with current status", "Label stale issues", ...]
  }
}
```

Key Learnings & Next Steps

KEY LEARNINGS

1 **GitHub API rate limits are real**

Caching is essential — we implemented 5-min TTL to handle unauthenticated bursts gracefully.

2 **Structured AI output requires discipline**

Claude responds better with explicit JSON schema in the prompt plus fallback parsing.

3 **Staleness ≠ worthless**

Some of the most valuable repos are the most abandoned — stars and forks tell a different story.

NEXT STEPS

Q1 **GitHub App Integration**

Install RepoRevive as a GitHub App for automated monitoring and weekly revival reports.

Q2 **Batch Analysis & Discovery**

Analyze entire GitHub organizations or search for abandoned repos by topic/language globally.

Q3 **Revival Marketplace**

Connect abandoned repo owners with developers who want to take over maintenance.

Q4 **Enterprise & SaaS Tier**

Team dashboards, Slack notifications, Jira integration, and private repo support.
